Post-normal speculation in macro design of a wealth-based economy where:

_Real wealth is a measurement of a robust ecology and of the general health and happiness of the people!_
“And so, while the end-of-the-world scenario will be rise with unimaginable horrors, we believe that the pre-end period will be filled with unprecedented opportunities for profit.”
“Yes, the planet got destroyed. But for a beautiful moment in time we created a lot of value for shareholders.”
There is an almost gravitational pull toward putting out of mind unpleasant facts.
And our collective ability to face painful facts is no greater than our personal one.
We tune out, we turn away, we avoid.
Finally we forget, and forget we have forgotten.
A lacuna hides the harsh truth.
What We Think About When We Try Not To Think About Global Warming

Toward a NEW PSYCHOLOGY of Climate Action

Per Espen Stoknes

Foreword by Jorgen Randers
Planet Earth, ‘we the people’ have a paradigm problem!

I have seen the enemy, and it is us!
The three interconnected “Es”

- Ecology,
- Energy
- Economics
There appears to a disabling mystique behind the curtain at the end of the yellow brick road, and not many people want to pull back the curtain to describe the magical strings, and who is plucking them.
“The few who understand the system will either be so interested from its profits or so dependent on its favors, that there will be no opposition from that class.”

Rothschild Brothers of London, 1863

From the Book, *The Gods of Money*
William Endgahl
There's no easy way to say this. You have people.
Today’s

Monetary Economic System (MES)

must be replaced
The Bull reacts to The Bird
I was taunting the bull at the Birmingham England stock exchange, fall 2008, at the peak of that monetary crash
‘You can't manage what you don't measure.

An old management adage that is accurate today.
What is the human Carrying Capacity (CC) of your country?

To not know this critical number is the greatest human governance failures of our times
Real wealth is a measurement of a robust ecology and the general health and happiness of the people!

Riane Eiltsler
The Real Wealth of Nations
The Need for a biophysical-based paradigm in economics in the second half of the age of oil

Title of a 2006 paper by C. Hall and K. Kitgarrd
Harmut Bossel states: Path B flies in the face of current mainstream economic thinking. It would require drastic changes in the current system. It would have to turn around very strong current development trends. So is it realistic? And above all, is it really necessary to change the current system so much to make it sustainable? Couldn’t we perhaps just introduce small changes in the present system to achieve the same result? No. In looking for another riverbed of future development, one tries to find a solution that is as close as possible to the old one. Path B is as close to the old one as sustainability would allow. If one compromises on this or that, the path is no longer sustainable.
