Sustaining Prosperity, Nature and Wellbeing

What do the Indicators Tell Us?

Peter L.P. Bartelmus

This book begins by assessing the validity of available data, indicators and indices in decision and policy-making. It goes on to demonstrate how indicators and their aggregation could facilitate assessing the micro-macro link of decision-making and help revise policy priorities around environmental and sustainability issues. Confronting the persisting polarization of environmentalists and economists, this book will be of great relevance to students, scholars and professionals with an interest in environmental and ecological economics, sustainability indicators and environmental policy.
